Field of the Invention The present invention relates to a method of producing a thin film device, and more particularly, it relates to a method of producing a thin film device including a semiconductor thin film provided on a substrate of Si, Ge or the like. 2. Description of the Background Art In recent years, a technique of producing a thin film device by utilizing a semiconductor thin film formed on a substrate of Si, Ge or the like has been energetically developed in the field of producing a semiconductor device. For example, a thin film device such as a thin film transistor (TFT) is composed of an inorganic semiconductor, an inorganic
