

Section Cut Face - Extensions - SketchUp Community

Feb 07, 2020 Hi, I'm using Sketchup 2018 and want to create a section plane. (Yes, I know I have three other options . I want to keep the section plane in edit mode so that I can move it with the cursor etc. How can I get this? I cannot seem to have a separate selection during running. It always appears on the same object. Any help would be much appreciated. A: The process is a bit convoluted, but it's quite a common project, and Sketchup has provided a good tool for it. For example: If you right click on your model, you can hit a feature called 'Extrude Profile Mode'. In this mode you can extrude out the faces of your model, like so: Then you have the option to cut out the extruded faces and see what you get: To make a section cut, you do exactly the same thing. Clicking on a face extrudes it, and you can extrude any number of parallel faces by holding down the control key. Then, when you see a new face that you've extruded, you can click it to create a new face in another (or the same) plane. In the next image, I've extruded a series of four faces, and made a section cut in each one. I can move these planes, rotate them, remove them, and view them all separately: Unfortunately it's not clear if you can create a section cut in one part of a model and a section cut in another part without deleting the first, so you may have to delete them individually. On a final note, if you have an addon like the one you mentioned, this really shouldn't be a problem, you can always include this as an option in the undo/redo window. Before the time of Victor Hugo, there was a man by the name of Jean le Secq. A Frenchman who lived in the 15th century, he wrote a book titled Le Testament de la Bible, which was a condemnation of corruption in politics. The Archbishop of Paris ordered that he be burned at the stake. No one else was brave enough to burn his book, so it was done in secret. Read about this improbable event in Pertinax's Book. My Philosophy: Le Secq's

Section Cut Face Plugin Mar 14, 2018 Download Section Cut Face Plugin in SketchUp You can Download here. I also found this plugin on SketchUp. Dec 16, 2017 File can be found here: Oct 12, 2019 You can create Section Cut face within SketchUp by making Section planes on faces or using extrusion.
