Category:Films directed by Aparna Sen(1) Field of the Invention This invention relates to a fast-turning spindle, and in particular to a method of attaching a fast-turning spindle to a shaft. (2) Description of the Prior Art When fast-turning spindles are mounted on drive shafts, one method is to apply adhesive to a circumferential surface of a shaft, then insert a fast-turning spindle into the shaft until the fast-turning spindle is tangent to the circumferential surface of the shaft. The adhesive must be sufficiently thick so that the fast-turning spindle is retained within the shaft without rotation. However, when the adhesive is very thick, the adhesive strength is low, and the fast-turning spindle can rotate within the shaft. Therefore, to prevent rotation of the fast-turning spindle within the shaft, the adhesive must be thinned, and this thinning of the adhesive creates voids in the adhesive, which can lead to leaks of the adhesive. The adhesive used may be a liquid adhesive, which can fill the voids and retain the fast-turning spindle in the shaft. However, with liquid adhesives, voids in the adhesive are difficult to remove, and it is very difficult to remove the voids completely. Another method is to insert the fast-turning spindle within a shaft, then apply adhesive to the circumferential surface of the shaft. The adhesive is then removed from the circumferential surface of the shaft. However, after the adhesive is removed from the circumferential surface of the shaft, the fast-turning spindle has an increased risk of being dislodged from the shaft, as the shaft is now without

$z \in \mathbb{C}$. I've got to do the Cauchy-Riemann equations, but when I try to do that, I get this in my book: $\left[\begin{array}{c} z^2+i \\ 2z^2+i \end{array} \right]$ but z^2 is non-infinitesimal. How do I see that? A: Just note that $\mathrm{Im}(z^2) = \mathrm{Im}(z) \mathrm{Im}(z)$ and $\mathrm{Re}(z^2) = \mathrm{Re}(z) \mathrm{Re}(z)$. 2d92ce491b
