Category:Accordion manufacturing companies Category:Manufacturing companies established in 2007 Category:Electronic musical instruments Category:Electric and electronic instruments Category:Musical instrument manufacturing companies of Slovenia Category:Handcrafted musical instruments Category:Slovenian musical instruments1. Field of the Invention The present invention relates to an electrical connector and, more particularly, to an electrical connector for electrical connection with a mating connector mounted on a printed circuit board. 2. Description of Related Art U.S. Pat. No. 6,093,523, issued to Hong et al. on Jul. 25, 2000, discloses a conventional cable connector, which comprises an insulative housing defining a plurality of passageways therethrough, a plurality of contacts received in the passageways, a metal shell enclosing the insulative housing and a lever connected to the metal shell. The metal shell defines a plurality of receiving grooves respectively aligned with the passageways for the contacts. The contacts each has a rear portion received in the receiving grooves and a front portion extending beyond the receiving grooves. The

lever has a base portion rotatably mounted to the metal shell and a pair of pivoting arms extending from the base portion. Each of the pivoting arms has a stop face at one end thereof for abutting the front portion of the corresponding contact. When the lever is rotated from a first position to a second position, the rear portions of the contacts can be separated from the receiving grooves. Thereby, the contacts can be easily pulled out from the receiving grooves. In addition, when the lever is rotated from the first position to the second position, the contacts will not be pulled out so that a user cannot accidentally dislodge the contacts from the receiving grooves. In the aforesaid conventional cable connector, when the contacts are pulled out from the receiving grooves, the contacts need to move backward from the front portion thereof, which is complicated. Hence, an improved electrical connector is desired to overcome the above problems.

New Rotation at Candy Bar by Moira on March 21, 2011 Any one of you who know me personally know that I LOVE chocolate. I could sit and eat chocolate for days, and unfortunately most days I do. Sometimes, though, I find myself without a little something to nibble on, and when that happens I find myself craving a simple, fast snack. This is when I reach for a candy bar. I 2d92ce491b
