TOKYO—Tokyo Governor Yoshihide Suga announced Wednesday that the city will be hosting the 2020 Summer Olympics as scheduled, despite a public health advisory warning the city is not prepared to handle an influx of visitors—especially foreigners—should the Games go ahead as planned. Mr. Suga’s announcement comes just one day after Japanese Prime Minister Shinzo Abe told reporters that “we will respond to the situation as it evolves, but I can say nothing now.”

...Q: MongoDB + Titan: Combining multiple tags in one single query for spatial search I have the following kind of situation, which is a little bit complicated to explain. But I will try to do my best. I have a set of documents structured something like the following: { "\_id" : "my\_id", "created" : "2016-08-24T14:00:00Z", "user" : "user\_1", "coordinate" : { "lon" : 0, "lat" : 0 } } Let's say that a bunch of documents got created in the last hour and several of them have the same "user" property. My question is: I want to do a spatial search on the "coordinate" property of the documents. MongoDB + SimpleQuery: I can query multiple properties using the SimpleQuery: collection.find({ \$query: { \$or: [ {coordinate.lon: lat}, {coordinate.lat: lon}
