## AutoCAD Crack + [Mac/Win]

In 2002, Autodesk released AutoCAD LT, a lightweight version of AutoCAD, which allowed users to create drawings on their computers or mobile devices. Today, AutoCAD LT is considered a component of AutoCAD, and it is used to create drawings and design documents of varying complexity. As a result, many users often interchange the terms "AutoCAD" and "AutoCAD LT." How to Access AutoCAD You can access AutoCAD directly from your web browser, through a web app, or from the mobile app. You must have a valid Autodesk account to access AutoCAD. AutoCAD 2017 and later AutoCAD can be accessed via desktop web browsers or mobile devices. Web app Your browser should display the Autodesk product registration page, and direct you to the download page. Download the latest version of the Autodesk app. You may need to agree to the license agreement to continue. Mobile app Your mobile device should display the Autodesk product registration page, and direct you to the download page. Download the latest version of the Autodesk app. You may need to agree to the license agreement to continue. Accessing AutoCAD Mobile Before you can access AutoCAD Mobile, you must register an Autodesk account and add your email address to AutoCAD. Mobile app (iOS) Download the Autodesk app from the App Store (on your iPhone or iPad), and register. You'll also need a valid Autodesk account and an Autodesk account that you can connect to from your desktop computer. Then you can continue to AutoCAD through the app. To access the desktop software, you can either use a desktop computer on the same network or your iOS device. A long time ago I learned how to check if a string value contains a comma using the regex method. This is what I learned: `string[] temp = { "1,2", "1,2,3", "4,2,5" }; foreach (string s in temp) { if (Regex.IsMatch(s, @"\d+", RegexOptions.IgnoreCase)) { //s = "1" } }` Using a regular expression is a very good way to check if a string value contains a comma. But I'm now finding that using the Regex method is very slow. Is there a faster way to check if a string value contains a comma? EDIT: By "a very good way to check if a string value contains a comma", I meant the method of using a regular expression. I want to avoid using a regular expression and use the method of checking if the string contains a comma using a loop. A: Since we have the guarantee that there is only one digit, we can use a simple `string.IndexOf(',')` check. A: a1d647c40b
