Computerworld: Lost Notes Is your PC's memory safe?A couple of small mistakes can have big repercussions. For instance, deleting or overwriting important files and folders can create all kinds of trouble. I would hate to lose some of my documents. But I would hate even more to see them destroyed. In a word, a data loss or file corruption can affect both your PC and your business. And whether or not you have an antivirus program, it can be easy to recover from a lot of these problems. Some malware infections, such as spyware or a rootkit, might make it impossible to fix a file. Sometimes, though, you might be able to restore an important file that you accidentally deleted. Or you might be able to retrieve a backup file or restore a saved web page. So, here are some ways to recover deleted files or important folders, as well as some ideas for keeping your PC safe. Fix Data Corruption If you accidentally deleted important files, you might find it easy to recover them. But what if you didn't have a backup copy? Don't fret. You can usually recover a file that's been deleted or overwritten. Fortunately, some common software programs, such as WinRecovery.com Data Recovery and iExplorer Hard Drive Recovery, can help you do this. If you don't have a backup copy, it might also be worth the time to consider backing up your files to a CD-ROM or another external hard drive. You might find that a lot of data recovery tools, including Undelete-
