What's New in the AutoCAD?

When you import an image, it brings all of the image's settings (such as its units, colors, and resolutions) with it. Because these settings don't change, the drawing automatically updates. Importing a highly detailed image to a DWG or DXF file, or to a DWF file, may take longer than desired. Now, AutoCAD always imports in the optimal resolution automatically. So, once the file is imported into the drawing, AutoCAD will determine what the best settings are and will automatically update all of your drawing objects to match. You can also export a drawing and its imported images to a DWF file—just right-click the image in the Windows Explorer window and choose Import in a DWF file. Drawing Objects in DWG Files: You can also draw shapes and define parameters, similar to what you can do in a DWG file. Now you can place and modify AutoCAD objects in a DWG file, such as a DWG drawing file. To do so, double-click an existing object. You can also now create a new shape and immediately apply parameters to it. Just click inside the Shape Line toolbox to open the shape palette, and select a shape. In the shape palette, you can apply dimensions, predefined curves, hatch patterns, drop shadows, and other AutoCAD options, just as you can in a DWG file. Drawing Surface in PnP3D and Other Cloud-Based Collaboration Tools: You can now open Surface text and shape files directly in AutoCAD, using the new 3D Surface Cloud Service. When you create or modify surfaces, you can see all of the parameters of the new surface, including colors, contours, pattern, and other parameters, in the preview in the Surface panel. Now, when you preview a 2D or 3D surface on a 2D page in PnP3D, the drawing is updated automatically. You can also use the 3D surface cloud service to create new surfaces from 2D or 3D models. Color Mappings in Camera Clipboards: Now, you can associate a camera with any drawing to see what the drawing looks like from any other camera. When you create a camera in a 2D drawing, you can map colors for the screen. When you see a color on the image in the
