Q: Rails - Using s3_direct_uploader gem in production environment I'm trying to use the s3_direct_uploader gem in my rails app, and I'm having trouble with it in production. If I start the server with production.rb file set to true, the image upload form doesn't show up, and when I run the server with development.rb set to true, I get a lot of errors like: "Mime::Type::Undefined not registered" I've tried setting up the upload form to return the image to a different controller with a public route. The image shows up, and when I click on it, it downloads. Can someone please tell me what I need to do to make it work on production? A: Try including these 3 gems in your Gemfile: # gem 'aws-sdk-v2', require: 'aws/s3' # gem 'aws-sdk-v2', require: 'aws/s3/s3' gem 'aws-sdk-v2' This should solve the problem for you. This 77a5ca646e

Source: For those of you asking about AvDSP AvTSP and AvSV and their UI controls To those wondering about their UI controls...they're not built into the AvCiscoTSP. They're built into the AvTSP and AvSV apps, which are great, and can offer audio tuning features beyond AvCiscoTSP, but they are not the same and are not directly tied into each other, as they are separately developed. AvCiscoTSP was only created because we thought the AvTSP and AvSV apps needed a volume control overlay. It's not an exact replacement for the AvTSP or AvSV volume controls, but it does offer similar functionality for record and playback volume adjustments. * Cheers -Scott Doing the AvCiscoTSP for my Linux box with one AV/Meters VSTi as well as a SoundFont playback app. - ScottP You cannot post new topics in this forumYou cannot reply to topics in this forumYou cannot edit your posts in this forumYou cannot delete your posts in this forumYou cannot vote in polls in this forumYou cannot attach files in this forumYou can download files in this forum Please support our site. What's New in the WaveGain?

WaveGain is a lightweight Windows application whose purpose is to analyze WAV files, calculate, and generate the recommended gain adjustments, as well as apply the ReplayGain standard, used for measuring the perceived loudness of audio files. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to apply the ReplayGaind standard on the breeze. It sports a clean and straightforward layout that allows you to add files to the list using the built-in browse function or simply dragging and dropping them into the primary pane. Plus, the application lets you upload an entire directory. WaveGain gives you the possibility to adjust all audio items by the same scaling factor, so they can have the same level of loudness, or analyze the ReplayGain value for each of file. Other important options worth mentioning are represented by the possibility to apply dithering effects (light, medium, or heavy noise), and select the output format. The tool offers support for batch processing, which means you can add multiple WAV files and apply gain adjustments for all of them at the same time. What's more, the application keeps a log file with details about the entire process which can be exported to plain text file format. All things considered, WaveGain offers an intuitive layout and a handy set of parameters for helping you normalize the loudness for individual WAV files or albums, and is suitable for beginners and professionals alike.CHICAGO – A federal appeals court ruled Friday that the families of victims of flawed 1989 convictions in a college admissions scandal will get a chance to retry their cases. Judge Michelle T. Friedland ruled from the bench that the 4th U.S. Circuit Court of Appeals in Richmond, Virginia, will consider whether to reconsider its June decision that the families of Mark Riddell and Felicity Wildman could not sue the college coach, The New York Times reported. "It's a huge victory," Wildman's father, John, told the newspaper. "Mark's one of my best friends. He's been gone for 27 years." Lawyers for the families accused the coach, who was sentenced to four years in prison for accepting $6.5 million in bribes, of misleading families and conspiring to cheat on college entrance exams to help his son gain admission to the University of Southern California, the Times reported. "We are pleased with the court's ruling, and will be working with the prosecutors," Thomas DiBiase, a spokesman for the U.S. Attorney's office in Washington, told the newspaper. Lawyers for the families told
