## Ruby Tips and Tricks for the Trotec Laser Software

trotec job control software trotecjob control software trotec job control software download trotec job control software trotec job control software Prepare your laser before cutting a piece of wood. Set the machine parameters and prepare the job if needed. Learn how to use the JobControl® laser software in this free workshop. This software allows you to prepare your laser, prepare jobs before cutting, edit job parameters, and monitor your process. Learn the interface, select the job, and begin. Read a quiz on JobControl® 12.1.0 Once you have created a new job, you can use the results in 3 ways: Get Started: If you have a CAD file, then you can import it directly into JobControl®. If you don't have a CAD file, then you can import a DXF, DWG, or STEP file using the Import feature of the Job Control software. Check the Help button for frequently asked questions. You may also use the Job Control Wizard to prepare the job automatically, or use the parameters assigned to the job. If you need to learn more about the Job Control software, then go to the home page and select a topic from the options in the left-hand menu. Now go to the menu item "Help" and start browsing the system. You'll find plenty of articles to help you with your design and cutting needs. Select the topic you want and select the instruction you need to complete. Continue making selections until you have all the information you need. Once you are finished, go back to the main menu and select the option "Help". Then select the topic "Getting Started" to get started. The software will then display the following steps: Setting the CNC laser parameters. Preparing the next job. Removing files from the directory used by JobControl®. Setting the laser. Adjusting the laser power. Selecting the laser head. Adjusting the laser focus. Setting the axial feed. Selecting the reference size for the job. Selecting the layer depth. Setting the laser pattern. Selecting the stroke angle. Adjusting the laser overlap. Ensuring the CNC machine is ready for cutting. Selecting the laser software. Selecting the programming language. Configuring the parameters of the software. Checking the file type. Checking the file directory
