Quick Cliq Activation Code is a small application, working as a Personal Assistant. It can be used as a time management tool as well as a clipboard manager. It has a helpful web interface, that can be accessed through the web browser. This makes it possible to add frequently used files to the context menu of your desktop. Star Wars Battlefront returns on November 17 for \$60, and now we have details on the first new DLC we'll see this year: it's called "Imperial Assault," and it's set on the Death Star. EA announced today that the pack will be released on November 17, and will include five new maps for the game—including one on the Death Star, a fully fleshed-out version of its popular Tatooine map from the first game, and four others set on the planet Kashyyyk, Endor, Hoth and Sullust. The headline features of this pack, though, are four new troopers to add to your hero's squad, and a single new hero, the Imperial Assault Death Trooper—this early image of him looks fantastic: Featuring "armor that would make a Starkiller look silly," and a new shield-based melee ability called Overload that lets you pop off a few blasts without stopping to reload, the Death Trooper sounds to be a massive improvement over the semi-buggy-droid Exegesis, and he'll be a fantastic addition to any battle. Aside from the new tanky trooper, the next batch of features will include the Hutt Ball Game, which will include all the toys that make the game into a real-world match, plus a new Playlist Battle mode for 1-on-1 battles, and an update to the pre-existing "Galactic Assault" mode to include objectives and rewards. There's no word yet on whether this expansion will be free, and it'll come to players on all platforms—so anyone who was worried that this version of the game wasn't going to continue to support PlayStation 4 users should take a deep breath. \* @github Joomla Component Builder

Q: Proof of the equality between exponential and polyomial functions I have the equality between the exponential and polynomial functions. I have a paper that states the following: But I can't understand how they get the following:  $w = 1 + (1 - x^2/t^2)^2$   $w = 1 - x^2/t^2 + 4x^4/t^4 - 25x^6/t^6 + 76x^8/t^8 - 161x^{10}/t^{10} + 190x^{12}/t^{12} - 100x^{14}/t^{14} + 35x^{16}/t^{16} - 5x^{18}/t^{18} + x^{20}/t^{20}$  So I would like to know how they get to that function and what is meant by  $w$ . Thank you very much for your help, the mathematical terms of the paper are very useful and I am studying them.

A: You have  $\ln(1+t) + \ln(1-t) = 2 \ln t$   $\frac{1+t}{2} + \frac{1-t}{2} = t$   $\frac{1+t}{2} + \frac{1-t}{2} = 1$
