Description All Features Noise reduction
Image and video stabilization The noise reduction feature is the first thing to mention. It is located in the advanced section of the settings screen and is turned on or off. There are several types of noise included in the MOV format. Using this feature, you can compress them to remove that annoying noise and preserve your original video at the same time. Depending on the type of noise, you can adjust the size of filtering using the "quality" slider. But beware of the quality loss - it is rather high - from 70% to 90%. Image and video stabilization, on the other hand, is a processing feature that does not in any way affect the image quality. With this tool, you can filter out "floating objects" as

well as remove all kinds of distortions that create a jerky movement of objects. Output quality The output quality is located on the first page. Here, you can set the frame rate, width and height as well as the video bit rate. The lower the quality of the video is, the greater the size will be. Quality for audio The quality for audio is located on the next screen and can be set to AAC, AAC-LPCM, AAC-HE-LPCM, AC3, AAC-LTP, MP2 or MP3. Audio and video settings The audio and video settings are located on the third page and allow you to set the video frame rate, aspect ratio, sample frequency, brightness, contrast, saturation, and volume. Aspect ratio The aspect ratio is located on the next screen. Here, you can choose from a very small list of possibilities - 360p, 720p, 1080p, 1440p, 2.35:1, 3.4:1, 16:9 and 4:3. Export settings

The export settings are on the last page. Here, you can choose the output format, the filename extension and the destination folder, as well as the subfolder inside the output folder. Cool Free MOV to All Video Converter is a fairly simple software tool, but the full version is not only the most important feature. For example, you can import files into the application via drag and drop or add files with a predefined list of extensions.

Conclusion If you don't need the most advanced feature, Cool Free MOV to All Video Converter should be enough
