File Updates and Fixes: AutoCAD has been updated to the 2019 release version, which includes a new feature called version control. When you update your drawing, you will see the new version number (2023.0) in the file name. When you start a new drawing, you can import all of your previous versions of your drawing and continue from any point in your past. The new “History” feature shows you a list of your previous versions, with the last version you were working on. And your previous versions are stored in your last folder, which lets you quickly open the previous version you were working on. The new version number also works as a filename for text created in “Visibility”. You can now change the version number to read any text you create. For example, you could have the version number include your initials or company logo. When starting a new drawing, you can now specify a version to start from. This version is automatically imported when you open your drawing. All of the updates above apply to the Windows desktop app. The Windows mobile app has its own release schedule, and is generally updated six weeks after the desktop app. You can also open or view documents from 2019 (that are being opened with Windows 10), and they will automatically update to the new version. Other Improvements and Fixes: Asynchronous rendering. Drawings can now be rendered in a separate thread, which can increase performance when rendering a large drawing. (video: 1:30 min.)
