ManageEngine AD 360 Free Download consists of four components, namely ADManager Plus, ADAudit Plus, ADSelfService Plus and Exchange Reporter Plus. ManageEngine AD 360 provides you with a way to manage your Active Directory in a more efficient manner, thus reducing the management workload and bringing more productivity to your organization. ADManager Plus enables you to monitor and schedule AD tasks automatically. It performs various routine tasks, such as managing user accounts, and notifies you of any errors. Furthermore, it helps you to

maintain user accounts by changing their passwords, unlocking their accounts, and blocking their accounts. It also allows you to manage security settings, audit the changes to objects and groups, analyze and record event logs, etc.

ADAudit Plus is used to perform various security tasks, such as creating, deleting, moving and changing the permissions of Active Directory objects, report Active Directory alerts and analyze auditing logs. It allows you to perform advanced searches to monitor various tasks and events and provides you with a way to monitor users, computers, groups and policies. Furthermore, it provides a

way to monitor and record audit logs, as well as to keep track of Active Directory changes and activity.

ADSelfService Plus is a user account management component that allows you to reset users' passwords and unlock their accounts, as well as to optimize the organization's Exchange infrastructure. Moreover, it allows you to remotely log on to users' accounts, change users' passwords, and block their accounts. It also enables you to monitor and investigate user accounts and events and to locate network issues. Furthermore, you can forward mail for users and track their email activities. Exchange Reporter Plus is a monitoring and reporting

component that helps you to analyze the Exchange Server logs, view Exchange Server traces, and produce various reports such as event logs and status reports. You can easily monitor and troubleshoot various issues with Exchange Server, examine every change in the Exchange Server log, and investigate the problems in the Exchange Server. Furthermore, you can easily troubleshoot issues with Exchange, set the mail filtering rules, audit/monitor the access to Exchange Servers, investigate every change in the Exchange Server and record any event logs that are critical to your organization. In addition, you can also set the mailbox policy to prevent people from exceeding their mailbox

quotas. ManageEngine AD 360 Licensing: Please be advised that the product names, logos, brands, and other trademarks or registered trademarks are the property of their respective owners.

----- The KMA is a Macro-based solution that enables you to verify a user's logon to a system in a variety of environments (such as Active Directory or Unix). The main idea behind KMA is that it allows you to check the user's logon credentials from a remote computer. In addition, KMA uses a special feature known as TACACS+ to ensure that the authentication process

will be secure, since the logon credentials are sent over a dedicated connection. This means that TACACS+ will verify the user's logon credentials and send them back over a dedicated connection. This enables KMA to ensure that each of the user's logon credentials will be checked against a central database and not against any external resources such as an Active Directory. The main benefit of KMA is that, unlike other solutions, it does not allow you to perform a local lookup. Therefore, no matter how you perform your lookups, you will always be forced to use the central database.

KEYMA Compatible Operating Systems:

----- KMA is

not compatible with the following operating systems:

- * Red Hat Enterprise Linux 5.x or 6.x
- * CentOS
- * Ubuntu
- * FreeBSD
- * Scientific Linux
- * Debian Linux
- * Slackware Linux
- * Oracle Solaris
- * Microsoft Windows 2008 (64-bit edition)

KEYMACRO Features:

----- KMA consists of two components, namely KMA Server and KMA Client. The main purpose of the KMA Server is to provide clients with their logon credentials. The KMA Server uses an algorithm that will allow it to create a random sequence of letters and digits that can be used as a user's logon credentials. The KMA Client uses this sequence of letters and digits and verifies them

against a central database (for example Active Directory) and then sends them back to the KMA Server. KMA will always send the user's credentials in order to check whether they are valid or not. The main benefit of KMA is that it does not allow you to perform a local lookup. However, in order to save your time and effort, you will be required to verify your users' logon credentials from a central source. Another benefit is that you will be forced to use the central database as the local lookups may not work. KEYMACRO Supported Scenarios:

----- KMA will work the following scenarios:
77a5ca646e

1. AD Manager Plus is a tool that allows you to monitor all the operations that are performed on Active Directory. The most important functions of the tool allow you to:

- Monitor the creation of user accounts, groups, contact lists and the corresponding attributes.
- Monitor group membership changes and group modifications.
- Monitor changes in the attributes of user accounts, group memberships and other changes.
- Monitor the creation of group memberships and membership changes.
- Monitor the removal of user accounts, groups, contacts and other changes in the Active

Directory.

- Monitor group membership changes and group modifications.
- Monitor changes in the attributes of user accounts, groups, contact lists and other changes in the Active Directory.
- Monitor user account logoff and other changes in the Active Directory.
- Monitor the activation of user accounts, group memberships and other changes in the Active Directory.
- Monitor the deletion of user accounts, groups, contacts and other changes in the Active Directory.

2. ADAudit Plus allows you to analyze audit log entries and display them graphically. The tool has the ability to analyze and graphically display error messages.

3.

ADSelfService Plus allows you to reset user passwords and unlock their accounts and clean up AD objects that have not been used for a long time. 4. Exchange Reporter Plus allows you to monitor all the events that occur in your Exchange server and allows you to configure the appropriate thresholds for each of them. System requirements:
