## What's New In AutoCAD?

A new Markup Import tab will appear in the Object properties dialog in AutoCAD. It includes a drop-down list of file formats, as well as other helpful options for importing a wide variety of review documents (for example, web pages, graphics, charts, and voice memos). In AutoCAD, you can review and revise your model as you work. So, for example, if you accidentally erase something, you can just re-draw it. And, as the designer, you can keep track of what's working and what's not working. AutoCAD has an entire suite of command-line tools that support the import of markup from a variety of sources. These tools are available directly from the command line, as well as through the menu. Support for Microsoft Word files: Save time and effort by importing all the text-format requirements and style into your drawings from Microsoft Word (DOC/DOCX/RTF) or other applications that can export text-format requirements into a readable format that can be imported into AutoCAD. With support for DOC, DOCX, and RTF files, you can work with detailed text formatting in a familiar word processor interface, and import all of that text into AutoCAD, where you can then save it back to Word for ongoing editing and versioning. In addition, you can import other Word file formats, such as DOCX, from third-party sources. You can even import and export XML formats, such as the Office Open XML "OOXML" formats (.docx, .xlsx, and .pptx), from third-party sources. Text import of DOC, DOCX, RTF, and other text formats is now supported in the Upcase command. The Upcase command, along with the Upcase Edit command, can be used to correctly format and convert all new text in your model to match the capitalization and font style that you specify, and save that information as part of the drawing's metadata. Import and Export Document Map Styles: Create drawing-specific styles for applications that support export. Or, use the Document Map Styles to enhance the appearance of your drawings. These styles include details, such as the color of the
