Different tools have different capabilities, performance, time-saving and other features. Web downloads Download Manager also allows you to download individual files from a web site, based on a very simple rule.

This feature works as follows: Instead of downloading one file, your browser will download a whole web site. This includes the files and images. You can also enable a save panel, which enables you to download the file to a directory that you can manage (such as through FTP, SFTP, etc.). Note: Do not attempt to download the entire web site. You can download all pages by selecting the Website option. If you want to download the pages individually, choose "Website - click to download" and select which pages to download, then choose "File name".

Download Managers Download Manager will search the Internet for multiple downloads

that match a pattern of files. It is possible to use patterns for free and for paid versions. To use a pattern of files, enter the name of the pattern in the field that opens, along with the file extension. See also List of download managers

Q: Is it possible to use my own logic and change behavior of a contract? For example, I have a contract:

```
contract myContract{
    uint[]
    public array;
    mapping(uint => uint[]);
}
```
