gene: comparison of cDNA and genomic sequences. Human SWS1, a carboxypeptidase E-related gene, encodes a soluble cytoplasmic protein of 350 amino acids. The human SWS1 gene was cloned, its transcription start site mapped, and its nucleotide sequence determined. It is 3.4 kb long, contains 5 exons, and possesses a single transcription start site at site 164 bp upstream of the translation start codon. The 3'-untranslated region of the genomic sequence displays features in common with the 3'-untranslated regions of c-myc and beta-actin genes. A high degree of sequence similarity between the human SWS1 gene and the beta-actin and c-myc genes was previously reported and was suggested to indicate the evolutionary relationship of these genes. The data obtained in this

Read Helpful Critic Reviews Nov 06, 2018 I would recommend this book for someone who needs improvement in their writing and has a hard time with grammar. Does a great job of showing common errors that I run into. Would have made it a five star item except for the copyright format. Oct 12, 2018 I was

amazed at the comprehensive answer to a very intricate question I had. Oct 12, 2018 I really like the way this book is written and the examples are used to excellent end. When the U.S. military wants to “turn off” specific areas of a combat zone, or call up
