Bidirectional electrical stimulation of the medial prefrontal cortex was used to augment information processing. Monkeys (Macaca mulatta) performed a non-spatial or spatial version of an object-in-location task; during some of these sessions, the medial prefrontal cortex was stimulated and then later retested. Stimulation of the medial prefrontal cortex reliably enhanced the performance of monkeys on both versions of the task. In addition, its effect was specific in that it did not adversely affect performance in a concurrent non-motor task. These data show that the
