For the best experience with Photoshop, and to get the most out of this book, you should have an image editor for your computer. For a complete list of programs, go to www.gizoomedia.com/resources/software/front-line-image-editors-and-convertors. In the following sections, I talk about different aspects of Photoshop. Understanding the Photoshop workspace Adobe Creative Suite is a collection of different programs all in one, and this means that the workspace can differ depending on the program you choose. The Photoshop workspace shows all the tools and features you use on a single page (see Figure 5-1), but it's important to understand that the way the tools and features are organized varies from program to program. For example, the standard window, layer, and tool options for Photoshop are displayed on the top left. **Figure 5-1:** Most Photoshop documents start with a basic workspace. In Figure 5-1, I'm working with a three-layer document, and the name of the active layer is Layer 1. The tools and options are grouped in the upper left, and the cursor is over the Brush tool, which is clearly visible. The next image shows the same window and options, but it's cropped so you can see the selection tool in action on the artwork. When you launch a Photoshop document, you see a basic workspace similar to what's shown in the figure. In the background of this figure is a dialog box named Layers, which lists the layers in the current document. If you don't see a dialog box, click the down arrow on the top left of the image and choose Window⇒Layers or press Ctrl+L (Windows) or +L (Mac OS). After you click the down arrow, a small window named Layers that lets you see the name of the current layer appears in the top left corner of your workspace. (Note: For more on layers, see Figure 5-2.) The following list describes the buttons on the top left of the workspaces in each of the programs in the Creative Suite, including Photoshop: 1. Window: Provides a thumbnail view of any opened documents and lets you minimize or maximize the window. **Figure 5-2:** New files and any loaded documents are listed in the Layers dialog box. 2. Layers: Lets you review all the layers in the current Photoshop

Q: How to read data from an Excel DataTable to an array of JSON objects I have an Excel sheet that needs to be read and I'm using the following code: var excel = new Spreadsheet(); var dataTable = excel.getDataTable("Sheet1!A1:F2"); All works well. I now need to consume the DataTable and return a list of dynamic JSON objects. How do I need to modify the above code? Thanks. A: You could create a method for reading your data as JSON from a DataTable and return an array of type JSON. The getDataTable method reads your excel sheet and returns a DataTable object. You could then call getDataTable method and use the DataTable object to return a JSON object in a array: var excel = new Spreadsheet(); var dataTable = excel.getDataTable("Sheet1!A1:F2"); var json = dataTable.toJSON(); return json; Q: Search through SharedPreferences and put data into ListView I have ListView for Shopping List that I want to have filter for Price. The idea is the user could enter item's name into search bar(which is list's first element) and based on that type of search I will show the result in other columns(I am using an example because of simplicity) of the ListView. Now I can't figure out the logic for converting the search into the result. SharedPreferences will be perfect for such task but I don't know how can I loop through them and check what they have and then get the data and put into result //I am using another class because it is bigger than original. public class Basket {
