Photoshop Elements is another free editing and retouching program that is a bit simpler to use. Spot Healing with Healing Brushes Photoshop has some powerful spot healing capabilities. In addition to the regular healing tools and filters (refer to the sections "Recomposing and Retouching with Layers" and "Filling in Gaps with the Healing Brush," respectively), Photoshop has a spot healing tool that you can use to blend together fragments of an image. To use the spot healing brush, follow these steps: 1. Choose Spot Healing from the Spot Healing menu by choosing it from the Brush/Pen Options submenu, as shown on the left in Figure 16-11. 2. Click inside the image to define the area where you want the healing brush to work. 3. Pick a healing brush size that fits your current editing window. For optimal results, the healing brush's size should be large enough to include the area you want to treat. 4. Click and drag to paint the spot heal over the area. 5. If you don't like the spot healing tool, click the Remove button in the bottom-right corner of the main spot healing window to remove the spot healing paint from the image. **Figure 16-11:** Use the spot healing tool to heal small spots in your images. Light Spots with the Healing Brush Photoshop has an equally powerful tool for removing blemishes and eliminating faint or unsightly features in your images: the healing brush. This tool works much like the spot healing brush, but it also works well with light spots. For best results, use a soft, small size brush with its opacity set to about 50 percent. The size of the area you treat determines how much the brush strokes react to your selections. Lighter areas are more influenced by your selections than darker ones. For example, a light-colored spot (like a freckle or a sunburn) is more sensitive to selections than a dark spot that might be just part of an eyelid. To use the healing brush, follow these steps: 1. Choose Healing from the Spot Healing menu. 2. Click inside the image to define the area you want to treat with the healing brush. 3. Pick a brush size that fits your current editing window. 4. Click and drag over the area you want to touch up.
