

Trainz Simulator 12 Build 46957

I downloaded the.torrent and clicked on the "Unpack" button. No download took place. Note that before "unpacking" the torrent file, I put it on a music player. When I removed it from the music player, it still shows the "0KB" file size. There is no "unpack here" button. I have read the instructions, but I still cannot find a way of getting this thing to work. I'm using Windows 7. If someone can help me out, it would be greatly appreciated. A: I ran into the same problem with Ubuntu. This is what I did to solve it: Downloaded the game from the steam website Run the following commands to extract the.dat file from the.torrent file: wget gunzip -c4 file.dat.torrent > file.dat Found it in the folder you created for your games. You can close the terminal that opened after running the above commands and continue your game using the extracted.dat file. Hope this helps you. A: You could try opening the file with WinRAR and then extracting the.dat file. Then you should be able to install the game in Steam.
