## Logic Function Minimization Activation

Logic function minimization is a Windows software program whose purpose is to help you solve digital electronics design problems. This CAD utility is specifically designed for minimizing Boolean functions without using Karnaugh maps. Circuit minimization can be used for optimizing the area of complex logic in integrated circuits where elements take too much space and are expensive to implement. Portable running mode The tool comes wrapped up in a portable package which can be deployed on your system without having to go through an installation process, as you may simply open the executable file. In addition, you can copy it on USB flash drive or other devices, and carry it with you. Getting rid of the utility implies only the deletion of the files that you have grabbed from the Internet, as it doesn't leave any entries in your Windows registry and write configuration data in your computer. Simple looks Logic function minimization sports a clean interface that embeds all configuration settings in a single pane. There's no support for a help manual but the dedicated parameters are highly intuitive so you won't spend too much time decoding the utility's features. How it works The application gives you the possibility to specify the variable number, input the desired values in the dedicated panels, show the table, as well as check out the results directly in the main window. The results can be copied to the clipboard and transferred to other third-party utilities. Bottom line All things considered, Logic function minimization mixes up a user-friendly interface with several handy features for helping you minimize Boolean functions, and can be handled by all types of users, regardless of their experience level. Bluescreen Reporting Tool Internet Download Manager Useful Utilities Automatically Shutdown Windows The automatic shutdown function comes in handy when you're away from the computer or your system crashes. It makes sure that your PC will boot up again automatically to avoid losing important data and open programs. Data Recovery Recover your data after a system crash or in case a virus deleted them. The utility will even undelete documents, files, folders and more. Power Management Manage the power states of your Windows so it starts up fast and does not consume too much energy. Disk Defragmenter Reduce the file fragmentation on your hard disk, resulting in better system performance. Remove Duplicate Files Remove unnecessary files from the system and boost up storage space. Data Recovery

## What's New In?

Logic function minimization is an integrated logic minimization system that has a powerful optimization algorithm, it simulates the truth table and its superposition to determine which of the minimum number of inputs (vars) needed to achieve the desired output. Once this truth table is obtained, a forward and backward algorithm for finding the minimal configurations is done. The backward method is the one that allows you to find the "bad" elements of a circuit, and make it smaller or the replace them with more cost efficient solutions. The forward algorithm is used to find the minimum number of inputs (vars) that have to be added and substituted to build a new circuit which has the same output and the same low cost. For example, if we want to minimize the following table: LOGIC FUNCTION MINIMIZATION V1 V2 0 1 0 1 0 0 0 0 1 1 1 output: V1 V2 0 0 0 1 1 0 1 1 You can find a minimum configuration of that table to be the one with V1 input and V2 input, with two zero inputs and one output. Hence, we have a minimum of two inputs and one output. If we add to this minimum configuration an input of 1 at the right output, the output will become 1 and that table will be optimized to the following: LOGIC FUNCTION MINIMIZATION V1 V2 0 1 0 1 0 0 0 0 1 1 1 output: V1 V2 0 1 1 0 1 1 If you have to do this for hundreds of different truth tables this process will take a while. In the minimization mode it will scan the table and the number of inputs is fixed. The optimal configuration is found in just a few hours using the minimization table scan. The LCD display shows variables (number of inputs) and their values for the logical expression (output) being minimized. The rightmost column (output) shows the result of the minimization. The efficiency of the minimization algorithm is 100% and the numbers are calculated based on the number of possible

---

cases of each truth table (TBA), instead of time or number of table scans. Also the field memorize the given truth table into the minimization database for future use. The result report is in a list of the available items with their cost: Type = of functionality/cost Variable# = the variable

---

## System Requirements:

XBox360/PS3: 1 GHz CPU 500 MB RAM 12 MB Video RAM DVD-ROM NVIDIA GeForce 8600 GTS (512 MB RAM) or ATI Radeon HD 2600 XT (1 GB RAM) 128 MB RAM for Max Payne 2: The Complete Experience PC: Dual DVD-ROM Minimum Recommended System Requirements: Xbox360
