Connect to hubs on the
Internet. Chat

What's New In?

FlylinkDC++ is a free file sharing program for Windows that also enables users to chat and share files through the Internet. In order to make

it possible, this software makes use of Direct Connect and any Internet hubs where users are connected to.

Overview: FlylinkDC++ is an open source software application that lets you connect to various hubs on the Internet, chat with others on the main chat or send them private messages. It

also enables you to share files you have on your computer with other users, allowing you to chat or download files faster and with minimum efforts. FlylinkDC++ takes advantage of Direct Connect and any Internet hubs where users are connected to. In order to use this application, you will need to have a

computer connected to the Internet with at least two dial-up lines. The interface of this free software is quite cluttered and can be quite confusing at first, but it does make it possible for you to chat with users or view the files they share while you download them. FlylinkDC++ comes with an extensive

configuration window that packs an outstanding amount of categories. Among these, you can configure your client, set passwords, specify favorites, set the quality of the connection, among other useful functions. It also allows you to read RSS news, enable/disable anti-spam features, change the icon, set

the priority, specify the queue, share your files, check the firewall settings, configure the account settings, enable the internal media preview, use multiple accounts and the automatic ban feature. All in all, this is a very advanced peer-to-peer file sharing program that also enables users to chat and share files.

However, it does come with a very cluttered interface, packs an outstanding amount of functions and enables you to configure it quickly via its built-in wizard. Summary:
FlylinkDC++ is a free software application that makes it possible to connect to various hubs on the Internet, chat with others on the main chat
