File Locker is a file locker whose aim is to offer extremely secure, multi-level access, with a simple installation that requires no effort. To begin with, the software promises to maintain your private data in the best way possible, leaving it out of anyone's reach for a considerable amount of time. Once installed, it will automatically start up and keep all information it receives as unaccessed files, so users do not have to worry about its regular maintenance. To begin with, the application includes five configuration parameters, which you can edit to improve the utility's functionality. Allowing for customized presets is also possible, which simplifies the launcher's navigation through the virtual folder structure. Another handy feature is the option to lock the content of shared folders, given users can only connect to the folder through File Locker. However, the utility will not prevent them from sharing the content after the initial setup. File Locker securely stores and shares your private files Immediate Activation Key/Registration Code: With full support for the activation methods, File Locker provides its users with a comprehensive range of benefits, from a minimum of five presets and the ability to use custom ones to a nice preview and the ability to synchronize different versions. You are likely to get your registration key by installing the software, with the last step being to enter it manually, which is the most common activation method. Platform support: File Locker runs on all the Windows operating systems starting with Vista, since the application complies with the Windows API and it uses Windows system files.
