4Shared MEGA MEGA File Hosting. MEGA  
File Hosting. Mega is a cloud storage  
service which stores all your files in one  
place for easy access. It provides most  
popular features like upload, download,  
share, manage your files and access it from  
any other devices. Mega provides two types  
of accounts; Free and Premium. First sign  
up with any free account and then use the  
Premium account. If you have an account  
then visit the main home page of the mega  
website. Click on Account At the drop down  
menu, select Premium. After the payment  
process is complete, you will get your user  
name and password. A word of caution do  
not provide your credit card details unless  
you are 100% sure. Generate your account  
URL and use it to login. After login, go to  
your account page and upload your files.  
Enable your option to allow remote login in  
the account settings. When you are  
accessing the files, click on the directory

---

icon. There is an option for "copy link to clipboard" Copy the link and paste it on your desktop and open it. Your files are there in the folder. Access your files. MEGA-Cloud is a private mega cloud hosting service that can be used free of cost.

GitLab Docker: Change env.sh does not  
take effect on pull I have a dockerized  
GitLab setup that I need to modify (locally,  
not on the server directly). The Dockerfile  
looks like this: FROM docker.elastic.co/elast  
icsearch/elasticsearch:7.2.0 # Fixation ENV  
JAVA\_OPTS="-Djava.security.auth.login.con  
fig=/etc/java-util-  
properties/login.properties" ENV  
KAFKA\_OPTS="" RUN echo -e " Skipping  
installation of GitLab, " RUN apt-get update  
RUN apt-get install -y git \ && apt-get  
install -y redis \ && apt-get install -y python-  
pip \ && apt-get install -y python-dev \ &&  
apt-get install -y yum-utils \ && apt-get  
install -y postgresql \ && apt-get install -y  
python3-psycopg2 \ && apt-get install -y  
python3-sqlite3 \ && apt-get install -y

---

python3-xm1 WORKDIR /opt/gitlab/ COPY.  
/opt/gitlab/ RUN pip install gitlab  
COPY.gitlab-ci.yml /opt/gitlab/ EXPOSE 80  
CMD gitlab-ctl start EXPOSE 80 I have  
created a.env.sh file inside /opt/gitlab/ that  
contains the following lines:  
JAVA\_OPTS\_APPEND="-Djvm.output.file=""  
-Djvm.output.dir=/var/log/gitlab" KAFKA\_OP  
TS\_APPEND="-Dlogging.solar.appender=ST  
DOUT" When I run docker build -t myapp. I  
get the following error: ERROR: The gitlab-  
runner configuration must specify gitlab-  
runner\_install\_url. Could not start gitlab-  
runner, possibly because the required Elixir  
module is missing. See the logs above.
