Q: Return from async method to use in other async method and eventually return a Promise I have a method where I want to use the return value from an async method (a function that returns a promise) to use in another async method. I have code

---

```
that looks like this:  
async function  
doSomethingAsync() {  
  const result = await t  
his.anotherMethod().th  
en(({ foo }) => foo);  
  return result; }  
async  
function someFunc() {  
  const result = await  
doSomethingAsync();  
  console.log(result); }  
if (process.env.NODE_EN  
V == 'production') {  
  await someFunc(); }  
This code executes
```

```
normally, but when  
result is logged I get  
[Function] instead of  
the actual value. I'm
```

---

trying to execute this process in a Kubernetes Deployment. Basically, if the environment is dev/test, I want to use localhost, and if the environment is production, I want to use Kubernetes. I can easily get this working with a callback, but I would like to see if this is possible with Promises instead. However, I am getting an error that I've never experienced. error:

---

``result`` is not a function. It is undefined. I'm aware that the result variable in the callback is undefined, but I'm not clear why this happens with Promises. A: You are always returning a promise in your methods: `const result = await this.anotherMethod().then(({ foo }) => foo);` `Promise.all([result])` returns a promise, so the assignment of your result variable into

---

it is not only unnecessary, it's wrong. This Code executes normally No, it doesn't execute normally. Your result variable is not even initialized (var result; is dead code), and is undefined at the moment you try to print it out. If it is defined, it will print out the Promise that your method is resolving. Another problem with your code is that it doesn't do anything at all. If

---

you call `someFunc()`  
while developing  
locally (no reason to  
do this in production  
environment at all)  
you are likely to see  
an error as `undefined`  
is not a function. Q:  
How to use `MonoTouch`.
