below...[Current aspects of DNA structure and dynamics in chromatin].

Distribution and characteristics of intranuclear DNA-protein complexes were studied by electrophoresis in agarose gels. It has been established, that the content of complexes varies in the cells of different

tissues. Plasmid DNA of *Escherichia coli*, when introduced into the cells of various types was transferred into human HeLa cells. It has been found that the DNA in all the types of nuclear chromatin possessed the same resistance to lysing enzyme. C-chromatin of nuclei of human peripheral blood lymphocytes is the only

exception; it is much more labile than DNA of other types of chromatin. Last month, we introduced you to some of the features of our new Encog2.0 Alpha 2 release. In this article, we will cover one of the most useful new features - the question and answer interface. The question and answer interface enables you to pose a

series of questions to an Encog entity, and to receive the answers back. The basic process is quite simple: you pick an Encog entity and ask a series of questions to it. The entity can then answer a series of questions you pose to it (for instance, you ask a route planning classifier if the route to your destination is 1 km,
